

WonderArts Classes

Animation - Creating sets and characters through drawing is one of the most beloved forms of modern entertainment. Through this class students will learn more about the practice and creation of animations, designing characters, working with sound effects and helping create a short class film as their final project!

Art through the Ages - In this program students go back to the basics...the Stone Age basics! Covering the history of art from cave drawings to abstract expressionism, this program blends short history lessons with fun arts activities including creating cave paintings and experimenting with splatter art!

Fiber Arts - From felting, to weaving, to knotting and more, students who take this program learn to create everything from wall hangings to wearables to fabric street art!

Folk Arts - This hands-on class transforms everyday objects and materials found in nature into fun crafts and sculptures. Make a bug village, stick and "junk" sculptures, and use paper and papier-mâché and more!

Kitchen Science - This NEW program will lead students through experiments with ingredients available in home kitchens. Students will engineer towers, witness mini explosions, and test out their hypotheses as we explore the fun things that can happen with food when you don't eat it!
